Logo formats and download guidelines

A variety of logos are available for download in the Corporate Communications section of StoltWorld.

- JPG files: these are compatible with Microsoft Office products and are ideal for internal materials. Please use them only on a white background.
- EPS files: high-resolution files typically requested by external suppliers. These require specialised software to open.
- PNG files have transparent backgrounds, so they're ideal for both digital and print use. These files are typically requested by external suppliers.

To download a logo:

1. Select the checkbox next to your preferred logo.
2. Click the 'Download' button (as shown below).

Logo usage

There are three logo versions, each designed for specific background types: white, coloured, or dark.

Logo files are organised into folders named according to the appropriate background usage.

For more details, refer to page 8 of the Stolt-Nielsen Visual identity and style guideline.

LOGO STYLE 1

Stolt-Nielsen

Stolt-Nielsen 6mm

This is the minimum size at which the logo can be used.

The SN logo has been designed to be placed on a white or light-coloured background and should be positioned in this way whenever possible.

Using the logo on a coloured background

LOGO STYLE 2

We have produced logo versions for when you need to use it on darker backgrounds. You should always try to use the logo with our company name in black.

LOGO STYLE 3

However, we understand this may not always be possible, in third-party publications, for example. In these instances you may use the logo opposite, where our name appears in white text.

If you require further assistance, please contact idg@stolt.com.
